ROHES
REGION OF HURONIA
ENVIRONMENTAL SERVICES LTD.

Region of Huronia Environmental Services Limited (ROHES) has provided haulage, storage and transportation of municipal biosolids, non-toxic hazardous chemicals for many years. It is one of the largest contractors providing haulage storage and spreading of biosolid materials for many municipalities' water and sewage treatment facilities. Over the years it has increased it's construction capability.

ROHES can augment the service of the works department of municipalities when extra equipment is required for emergency services or pump outs because of service line ruptures. The specially equipped hydrovac equipment is an ideal method of utility line location in confined spaces where excavation equipment could be cumbersome or dangerous. Emergency services are available.

ROHES also specializes in farm construction and is well versed in site preparation for:

- **New farm buildings**
- **Fence line removal**
- **Septic systems**
- **Pit construction**
- **Driveway or access construction**

Contact ROHES today for more information on our construction capabilities.
